CIRQUE

High-altitude base camp tents must not only resist fierce winds, they must be able to support substantial snow loads, provide working and living room in lock-down weather and cope with increased UV bombardment. The Cirque starts with the proven core-framework design for such conditions: the 4-pole vee and cross combination - hub designs just don't put enough tube ends down to the ground. By adding further pole arcs over the two entrances and over the built-in, double-entranced vestibule we have created a tent with romp-home performance. The specification is completed with our legendary attention to detail. At just over four and a half kilograms the Cirque will also interest families or a 'pack of mates' three or four strong, not deterred by and requiring shelter from 'full conditions'.

SPECIFICATIONS

- » Vee-cross pole Dome with integral vestibule, 5-season, 3 to 4 person tent.
- » Inner tent pitches first, outer attaches over and can be used alone.
- » Min Wt 4.60 kg
- » Packed Wt 5.10 kg
