DART 2 UL WINTER FABRIC INNER

It's the all-fabric inner that distinguishes this 'winter' version of our popular hybrid inner 2-person backpacking tent. This model is only available with the high-tech, 30d, high-tenacity ripstop polyester with silicone elastomer face coating, providing enhanced water-repellency, snow shedding and UV resistance. The specs snapshot below points clearly to strong performance in all backpacking conditions: stability and strength in high wind, generous floor space for two tall occupants, good head room, independent access and vestibule space for each, good cross-ventilation (courtesy of the uncoverable mesh screens on the inner tent door panels) and the convenience of free-standing set-up. With its strong 3-pole framework and winter inner this Dart 2 is also great for snow camping.

SPECIFICATIONS

- » Totally Free-standing, 4-season, 2-person tent.
- » Inner tent pitches first, outer attaches over and can be used alone.
- » Min Wt 2.82 kg
- » Packed Wt 3.15 kg
