DART 2 STD MESH INNER

This 2-person tent ticks all the boxes when it comes to reliable performance across a wide range of backpacking situations: stability and strength in high wind, generous floor space for two tall occupants, good head room, independent access and vestibule space for each, excellent cross-ventilation, the convenience of free-standing set-up and a versatile mesh-walled inner that is ideal for use alone on tropical dry-season trips. This version uses our economical fabric option for the outer tent skin: 75 denier polyester with a regular durable-water-repellent face treatment. All WE tents incorporate the same uncompromising level of design and construction detail.
