

# Wilderness Equipment

## DART UL WINTER FABRIC INNER

By popular demand the Dart will become available in this winter version in October 2011. Everything said about the strength and stability of the hybrid mesh/fabric version is true of this winter version. It is a true, free-standing solo tent combining excellent storm strength and stability with good ventilation, generous floor area and useful vestibule space. The suspended-tub floor pan is particularly good in soggy ground conditions. The low-profile, three-arch design gives this tent a very good rating for alpine use. Like the 3-season version the winter the inner module can be used alone, without the outer skin fitted. The door is equipped with a large screen panel, exposed by unzipping the fabric cover.

### SPECIFICATIONS

- » Totally Free-standing, 3-season, "one-and-a-half" person tent.
- » Inner tent pitches first, outer attaches over and can be used alone.
