## TECTITE 2 UL

A new standard spacious, ultra-light shelter. At well under two kilograms minimum-pitch weight, the Tectite 2 is a remarkably spacious backpacking tent. Its resistance to rain, its wind stability and its airy ventilation make it ideal for a wide range of bushwalking conditions. Whether you think of it as a double-walled tent stripped to the bare essentials, or as an efficient fly with built-in ground sheet and insect protection, the result is a great one. A simple transverse pole supports a fully-sealed, single-skin canopy. Four pegs tension the suspended tub floor connected to the canopy rim with a full perimeter mesh band. A detachable ceiling panel, acting exactly as an inner tent roof, intercepts the condensation drips inevitable in any tent on those still, damp nights. If you choose to use the expansive floor area of this stable, airy tent to accommodate a third companion, the minimum-pitch weight comes in under 600 grams per person!

## SPECIFICATIONS

- » Single-pole, hybrid-single-skin, ultra-light two-person tent
- » Can accommodate three if necessary
- » 3-plus-season performance
- » Detachable ceiling panel acts an effective barrier when conditions mean condensation is unavoidable
- » Min Pitch Wt: 1.76kg
- » Package WT: 2.23kg
- » Packed Size: 45cm (pole section length) x 15cm diameter
- » Floor Dimensions: 259cm long x 178cm wide, Area: 3.8m<sup>2</sup>
- » Canopy Fabric: 30d ripstop polyester, silicone elastomer face, tape-sealed 1500mm HH polyether (PE) back coating
- » Canopy Colour: Red Ochre
- » Ceiling Panel: 40d air-permeable nylon, white
- » Floor: Suspended tub, 70d nylon, light grey 5,000mm HH PE coating.
- » Pole: Single, Scandium Air Hercules, insert tube, gold colour.
- » Pegs: 8 x 4-flute HT aluminium with pull cords
